X64 Xcelera-CL PX4 Full

PCI Express x4 Frame Grabbers

Key Features

- Half-length PCI Express x4 Board
- Acquires images from one Base,
 Medium or Full Camera Link* camera
- Rapid image acquisition rates up to 1GB/s and high-speed image transfer to host memory at 1GB/s
- Supports Camera Link operations up to 85MHz
- Extended feature set supports non-Camera Link pixel/tap configurations
- Windows Vista and XP Professional (32/64-bit) compatible
- ROHS compliant
- On-board FPGA based real-time Bayer decoding and shading correction of each input
- Power Over CameraLink (PoCL)
 Compliant

Advanced PCIe x4 image acquisition

Building on the field proven technology and performance of DALSA's X64 frame grabbers the new X64 Xcelera Series leverages the PCI Express (PCIe) platform to bring traditional image acquisition and processing technology to new levels of performance and flexibility.

The PCIe host interface is a point-to-point host interface allowing simultaneous image acquisition and transfer without loading the system bus and involving little intervention from the host CPU. Designed with the requirements of the machine vision OEMs in mind, the Xcelera Series will range from entry level frame grabbers, to high-performance image acquisition boards, to embedded vision processors.

Addressing the emerging needs of bandwidth-hungry machine vision applications, DALSA's Xcelera Series is defining next generation frame grabber capabilities with the ability to deliver bandwidth of 1GB/sec over multiple-lane PCI Express implementations with room to grow.

The X64 Xcelera-CL PX4 Full is a Camera Link frame grabber that is based on the PCI Express x4 interface. Compatible with a Base, Medium or Full Camera Link* camera, the X64 Xcelera-CL PX4 Full supports a wide variety of multi-tap area and line scan colour and monochrome cameras. For greater versatility, the X64 Xcelera-CL PX4 Full board can interface with camera pixel depths and tap configurations not covered by the Camera Link standard. For example, the Xcelera-CL PX4 Full can support 10-taps or higher with 8-bits per tap.

The X64 Xcelera-CL PX4 Full has been built within DALSA's Trigger-to-Image Reliability technology framework. Trigger-to-Image Reliability leverages DALSA's hardware and software innovations to control, monitor and correct the image acquisition process from the time that an external trigger event occurs to the moment the data is sent to the host, providing traceability when errors do occur and permitting recovery from those errors.

Software Support

All of the frame grabbers in the Xcelera series are supported by DALSA's Sapera Essential software package. Sapera Essential, is a cost-effective machine vision software toolkit that bundles board level acquisition and control with advanced image processing capability, featuring a value added, all new geometric search tool.

Sapera Essential is designed to deliver the critical functionality needed to design, develop and deploy high-performance machine vision applications while at the same time significantly lowering deployment costs.

X64 Xcelera-CL PX4 Full PCI Express x4 Frame Grabbers

Specifications

Function	Description	Function	Description
Board	Camera Link Specifications Rev 1.10 compliant Half length PCI Express 1.0a x4 compliant	Controls	Comprehensive event notification includes end/start-of-field/frame/transfer
	ROHS Compliant		Camera control signals for external event
Acquisition	Supports one Base, Medium or Full Camera Link		synchronization
	area and line scan camera Acquisition pixel clock rates up to 85MHz		Optically isolated TTL/LVDS trigger inputs programmable as active high or low
Resolution	Horizontal Size (min/max): 8 byte/256K bytes		(edge or level trigger)
Hosolution	Vertical Size (min/max):		TTL Strobes outputs
	1 line/infinite lines for line-scan cameras		PC independent serial communications ports
	1 line/16million lines/frame for area-scan cameras		provide support 9600 to 11500K baud Appear as system serial ports enabling seamless
	Variable length frame size from 1 to 16 million lines for area-scan cameras		interface to host applications
	128MB onboard frame buffer memory	Shaft-Encoder Input	Optically isolated quadrature (AB) shaft-encoder
	Integrated advanced tap reversal engine allows		inputs for external web synchronization
	independent tap formatting	On-board I/Os ¹	Supports up/down scaling
Pixel Format and Tap		On-board I/Os	4-optically general purpose inputs tolerate 5V and 24V DC signals 4 general purpose outputs
configuration	Supports Camera Link tap configurations for 8, 10, or 12-bit mono, and RGB:	Power Output	PoCL Compliant (4W max)
	For Base cameras in any of the following		Power-on-reset fused +12V output @ 1.5A
	combinations:	0.0	+5V DC output at 1.5A
	3x8-bit/tap, 2x10-bits/tap, 2x12-bit/tap,	Software	Device driver supports: Microsoft Windows XP and Vista compliant
	1x14-bit/tap, 1x16-bits/tap, & 1x24-bit/RGB		Supports Microsoft Windows Vista and XP
	For Medium camera - 4x8-bit/tap, 4x10-bits/tap, 4x12-bit/tap, 1x30-bit/RGB, & 1x36-bits/tap		Professional 64-bit ²
	For Full—8x 8-bit/tap Camera Link; 10x8-bit		Full support of DALSA DIGITAL IMAGING's Sapera
	non-Camera Link configuration		Essential, Sapera LT and Sapera Processing software libraries
Transfers	Real-time transfers to system memory		Application development using C++ DLLs and
	Intelligent Data-Transfer-Engine automatically loads scatter-gather and tap description tables from the host memory without CPU intervention		ActiveX controls with Microsoft Visual Studio
		System Requirements	PCI Express 1.0a compliant with one x4 slot
On-board Processing	,	Dimensions	system with 64MB or higher system memory
Bayer Mosaic Filter	Hardware Bayer Engine supports one CameraLink	Temperature	6.375" (16.1cm) Length X 4.20" (10.7 cm) Height 0°C (32° F) to 55° C (131° F)
Shading Correction	Base 8, 10 or 12-bit Bayer	Tomporatare	Relative Humidity: up to 95% (non-condensing)
	Bayer output format supports 8 or 10-bit RGB/pixel	Markings	FCC Class B—Approved
	Zero host CPU utilization for Bayer conversion On the fly Flat-line and Flat-field correction with		CE—Approved
	dead-pixel replacement		
	Supports Camera Link Base, Medium or Full		
	cameras		
Outside Til	User programmable calibration gain/offset maps	¹ Requires a separate slot for the bracket assembly ² Contact DALSA sales for more details.	
Output Lookup Tables Monochrome	Each input part has any 256y9 bit 1024y10 bit		
	Each input port has one 256x8-bit, 1024x10-bit, 1024x8-bit, 4096x12-bit, 4096x10-bit or		
	4096x8-bit OLUTs		
Colour	Each input port has one 8-bit in/out, 10-bit in 8 or		
	10-bit out, 12-bit in 12, 10 or 8-bit/out Lookup table
